

56 Gbaud Quad-Channel, Single-Ended Input, Linear Transimpedance/Variable-Gain Amplifier with 750 µm Input Channel Pitch, Flip Chip

Part No.

IN5664FC

Product Type

Transimpedance Amplifiers

Market Segments

Inside Data Centers

Applications

400G Optical Receivers

Features

- Supports baud rates up to 56 Gbaud
- · Quad-channel monolithic TIA/VGA
- 750 µm channel pitch
- Wide differential electrical gain
- High electrical bandwidth
- Adjustable output amplitude in AGC mode
- · Low noise
- · Low power consumption
- · I2C serial interface supported
- · Available in flip chip form

Description

The IN5664FC is a quad-channel, single-ended input, linear transimpedance/variable-gain amplifier (TIA/ VGA) for 400G optical receivers.

The IN5664FC operates in automatic gain mode. It can adjust its single-ended input transimpedance and delivers an output voltage in AGC mode.

The IN5664FC supports a very wide input optical power range. It has extremely low input referred noise current density and provides linear amplification.

The IN5664FC provides an RSSI function to monitor and report average optical input power.

The IN5664FC operates from a single +3.3 V power supply and is available in flip chip form.

To deliver the data infrastructure technology that connects the world, we're building solutions on the most powerful foundation: our partnerships with our customers. Trusted by the world's leading technology companies for 25 years, we move, store, process and secure the world's data with semiconductor solutions designed for our customers' current needs and future ambitions. Through a process of deep collaboration and transparency, we're ultimately changing the way tomorrow's enterprise, cloud, automotive, and carrier architectures transform—for the better.
